

Oxy-acetylene Cutting (Safety)

Aim

The course is designed to enable candidates to set up oxy fuel gas equipment in a safe manner for cutting and welding.

Objectives

At the end of the course candidates will be able to:

- Select and handle correctly the fuel gas required plus ancillary gases
- Correctly store the aforementioned gases
- Identify the relevant safety devices
- Select the correct regulators, hoses, torches, nozzles and gas pressures
- Carry out safety checks
- Light up and shutting down procedures
- Carry out burning and welding exercises

Duration: depending on delegates' experience/progress

Accreditation: Prospects Group Certificate
